this text is a chemistry problem solving resource appropriate for teachers and their students who are enrolled in high school advanced placement chemistry or in a first year college general chemistry course the book incorporates a chemistry problem solving plan one that uses an innovative graphic organizer strategy the strategy successfully evaluated with students combines problem solving processes with chemical concepts that will allow students to solve the most common and difficult problems encountered in the first year of chemistry topical problem solving will focus on limiting reactant stoichiometry identifying types of chemical reactions equilibrium acid base equilibria and electrochemistry why would this resource be of interest to chemistry students to be successful to get into a well known college medical school physical therapy or graduate program often requires that students get an a in your pre requisite

introductory general chemistry course to make matters worse many college professors feel that only a few students should get a grades and therefore they give difficult exams that many students fail this is the weeding out process that every pre health student is apprehensive about to succeed in this competitive environment entails not just studying harder or longer it means re organizing textbook content so that it is meaningful to the student this is the first text of its kind to employ a reliable research based strategy that incorporates a decision based visual tool to solve chemistry textbook problems ones that can make or break a career

microbiology is an engaging textbook presenting balanced and comprehensive account of major areas of microbiology in the form of questions and answers this question answer approach to present complex topics and theories of microbiology regarding cellular and non cellular microorganisms microbial genetics and molecular biology in higher plants and animals makes the subject interesting and easily comprehensible for the students

this book provides methods to train process operators to solve challenging problems the book is split into two parts the first part consists of two parts first developing a daily monitoring system and second providing a structured 5 step problem solving approach that combines cause and effect problem solving thinking with the formulation of theoretically correct hypotheses the 5 step approach emphasizes the classical problem solving approach defining the sequence of events with the addition of the steps of formulating a theoretically correct working hypothesis providing a means to test the hypothesis and providing a foolproof means to eliminate the problem the initial part of the book focuses on defining the problem that must be solved and obtaining the location time and quantity based specifications of the problem this

part of the book also presents techniques to find and define problems at an early point before they progress to the critical level the second part of the book deals with the utilization of fundamental chemical engineering skills to develop a technically correct working hypothesis that is the key to successful problem solving the primary emphasis is on simple pragmatic calculation techniques that are theoretically correct it is believed that any operator can perform these calculations if he is provided the correct prototype throughout the book the theory behind each pragmatic calculation technique is explained in understandable terms prior to presenting the author s approach these techniques have been developed by the author in 50 years of industrial experience the book includes many sample problems and examples of real world problem solving using these techniques theoretically correct working hypotheses can be developed in an expedient fashion

the image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon as it forms around particles of a metal catalyst carbon nanotubes are a recently discovered allotrope of carbon three other allotropes of carbon buckyballs graphite and diamond are illustrated at the left as is the molecule methane CH_4 from which nanotubes and buckyballs can be made the element carbon forms an amazing number of compounds with structures that follow from simple methane found in natural gas to the complex macromolecules that serve as the basis of life on our planet the study of chemistry also follows from the simple to the more complex and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement

glencoe chemistry solving problems a chemistry handbook matter and change

a solved problem outline for students with no high school chemistry background or a poor course in high school chemistry all topics are presented at an elementary level to commensurate with the introductory course simpler math is assumed developed a less intense approach to the basic concepts of chemistry a simpler manner of presentation there are hundreds of solved supplementary problems

chemistry the molecular nature of matter 8th edition continues to focus on the intimate relationship that exists between structure at the atomic molecular level and the observable macroscopic properties of matter key revisions in this edition focus on three areas the deliberate inclusion of more updated real world examples that relate common real world student experiences to the science of chemistry simultaneously examples and questions have been updated to align them with career concepts relevant to the environmental engineering biological pharmaceutical and medical sciences providing students with transferable skills with a focus on integrating metacognition and three dimensional learning into the text when students know what they know they are better able to learn and incorporate the material providing a total solution through new wileyplus by fully integrating the enhanced etext with online assessment answer specific responses and additional practice resources the 8th edition continues to emphasize the importance of applying concepts to problem solving to achieve high level learning and increase retention of chemistry knowledge problems are arranged in an intuitive confidence building order

the images on the cover call attention to the relationship between macro observations and the intimate structure of chemical substances and the changes both chemical and physical that they undergo fireworks one of the ingredients is

phosphorus a molecular form of which is believed to consist of linked tetrahedra of phosphorus atoms the chemical reaction of phosphorus with oxygen is partly responsible for the spectacular show of light carbon the element is found in several forms including the familiar diamond and another recently discovered sooty substance that consists of soccer ball shaped molecules often referred to as buckeyballs diamond is not the most stable form of carbon and is created from other forms of carbon at high temperatures and pressures deep within the earth acetylene torch cutting steel is possible because of the intense heat generated by the chemical reaction of acetylene with oxygen a reaction between molecules of C_2H_2 and O_2 to give CO_2 and H_2O hot air balloon the air that helps it rise is heated by the combustion of molecules of propane each composed of three carbon and eight hydrogen atoms stormy weather the evaporation of water serves to store energy provided by the sun subsequent condensation of the water vapor releases this energy and is the basis of all the weather systems on our planet

based on feedback from students and professors alike this introductory textbook has been revised to offer material in a different sequence and expanded end of chapter questions a major theme of the text is the introduction explanation and illustration of the problem solving methods of beginning chemistry approaches to solutions chemical problems and the unit equation factor label or dimensional analysis methods are explained in detail with numerous examples relevant analogies and special topics continue to reinforce introduce and illustrate chemical concepts

this general chemistry text centres on the theme that observable change in chemical systems is the result of molecular change the aims of this edition are to enable students to perceive matter and change at the molecular level and to help

build student confidence in their ability to solve chemical problems as they discover the relevance of chemistry to their lives
